Specifications

Operation
**Readout and Operation:** Unit shall register a total count of 10 or 15 turns, depending on the device. The number in the window indicates completed number of turns of the drive sleeve. Graduated circular dial indicates the percent of a partial turn of the drive sleeve.

**Dial Division:** 50 per turn

**Brake Lever:** Locking mechanism, positive action.

**Accuracy:** Backlash shall be zero between graduated dial and drive sleeve

**Rotation:** The indication shall increase with clockwise and decrease with a counterclockwise rotation.

**Transfer Point:** The number in the center of the window shall change as graduated dial rotates.

Mechanical

**Shaft Bore:** 0.250”

**Mounting:** For ALL devices, excluding the 503−0010, Install mounting bracket (included) between panel and panel nut. Multidial shall mount directly to shaft with spline socket set screw, located adjacent to No. 50 on graduated dial (hex key included).

For mounting the 503−0010 ONLY, the following steps need to be performed:
1. Remove plastic cap from top of dial.
2. Loosen screw in a counter−clockwise direction and remove sleeve from inside dial.
3. Insert potentiometer shaft into sleeve.
4. Insert the sleeve into the dial
5. Tighten the screw in a clockwise direction to grip the potentiometer shaft.
6. Replace the plastic cap.
